1.) Your body is approximately 55%: (check one):
   - Carbohydrate
   - Protein
   - Water

2.) All people process food in the exact same manner and speed:
   - True
   - False

3.) Chewing, swallowing and the muscular activity of the walls of the digestive tract itself are part of the:
   - Chemical Phase
   - Mechanical Phase
   - Lunar Phase

4.) The final breakdown of food particles is part of the:
   - Chemical Phase
   - Mechanical Phase
   - Lunar Phase

5.) The process of digestion actually begins when food enters:
   - The mouth
   - The large intestine
   - The duodenum

6.) Which leaves the stomach most rapidly?
   - Carbohydrates
   - Fat
   - Protein

7.) After leaving the stomach, the liquefied mass, called chime passes into the:
   - Large intestine
   - Small intestine
   - Pancreas
Chapter 2  Digestion

8.) The finger-like projections called “villi” help to:
   - Increase the intestinal absorption area by about 600-fold
   - Convert fat into protein
   - Increase red blood cells

9.) Draw lines to connect and demonstrate the digestion sequence:
   1. Small Intestine
   2. Mouth
   3. Large Intestine
   4. Esophagus
   5. Stomach

10.) The lymphatic vessels (tiny vessels in each villus) accept:
     - Digested protein
     - Digested carbohydrates
     - Digested fat
